# KURAVEX® FLOOR DRAIN

## KEEPS YOUR HOUSE CLEAN

### Well done, all clean and tidy!

The Kuravex floor drain, manufactured in Finland, is a handy aid designed to help keep your house clean. Placed in an entrance hall, the Kuravex drain stops the need for cleaning up any mud, sand, dirt, etc., that is walked in with shoes or paws, as it is all easily washed away - whether it's in your entrance hall, vestibule, utility room or veranda.

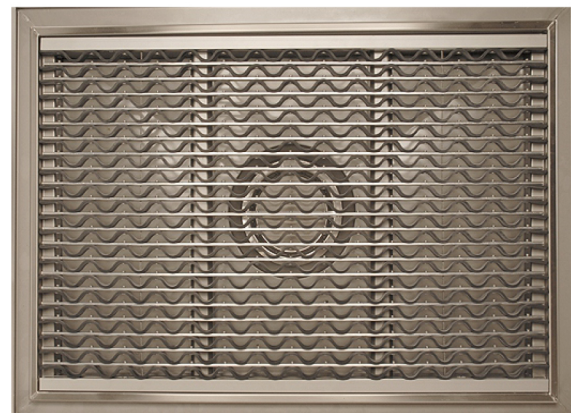

### Handy set

The Kuravex drain set consists of detachable grating, a tile-moulded frame, sink and sediment container. The drain is manufactured from stainless steel, and grating can be manufactured either from RST steel or aluminium and rubber. Included in the set are comprehensive installation instructions for different floor materials and a lifting hook is also provided. The compatibility of Kuravex drains with watertight seals has been thoroughly tested with Ardex products, by VTT Technical Research Centre of Finland Ltd.

### Hygienic

Kuravex drains are designed with particular attention to ease of use and hygiene. The sediment container is manufactured by deep drawing, enabling it to be easily cleaned. Kuravex grates have a standard size of 753 x 500 x 20 mm. The same grating fits all sinks, regardless of the floor covering. Sinks have a depth of 100 mm. Kuravex drains can be manufactured in different sizes, according to customer specifications, while the standard size designed for tile floors is 800 x 500 mm. A floor drain can also have the sink bottom connected to a drainpipe, if already installed.

### Kuravex designed for tile and composite floors:

- Ivi: 3314605, RST steel grating
- Ivi: 3314606, aluminium and rubber grating

### Kuravex designed for concrete floors:

- Ivi: 3314602, RST steel grating
- Ivi: 3314604, aluminium and rubber grating
